Santa Maria Valley Railroad's 14 miles of well maintained mainline track serves freight customers in the Santa Maria Valley. Our tracks are rated to transport 286,000 lb rail cars, we can transport the most modern freight cars. In addition to the 14 miles of mainline track, the SMVRR maintains many sidings and spurs with capacity to store rail cars.

The SMVRR has a complete locomotive and rail car repair shop and maintenance of way equipment. The SMVRR can serve off-site customers with track and locomotive repair maintenance.

Through our third party transportation logistics partners, the Santa Maria Valley Railroad can provide transload services, temporary warehousing of products, cross docking, and trucking for door-to-door service with your products.

Efficient

Our nation's freight railroads operate over 171,000 miles of track with over 1.3 million freight cars in service.

Railroads haul 40% of our nation's freight.

One railcar is equal to four truckloads.

Cost Effective

Rail freight rates have dropped 11% from 1981 to 2006, 55% in inflation adjusted terms.

Last year (2012), the Santa Maria Valley Railroad saved its customers nearly \$16 million in transportation costs.

Environmentally Friendly

Freight Railroads reduce highway traffic congestion. One freight car is equivalent to four or more trucks.

The SMVRR transported the equivalent of over 5,000 truckloads of freight last year.
